

	Operations & Safety	Community, Business & Environment	Feasibility & Cost	Recommendation
	<ul style="list-style-type: none"> • Balance of Regional Travel /Local Access • Travel Reliability and Safety • Capacity for Growth 	<ul style="list-style-type: none"> • Environmental Impacts • ROW and Acquisitions 	<ul style="list-style-type: none"> • Magnitude of Cost • Constructability and Phasing 	
Arapahoe Road Options				
<ul style="list-style-type: none"> • No-Build 	<ul style="list-style-type: none"> • Will not accommodate future traffic demands • Likely decrease in traffic safety as traffic volumes increase 	<ul style="list-style-type: none"> • Some impacts will likely result from planned improvements constructed as separate projects 	<ul style="list-style-type: none"> • Only planned and programmed projects included in No-Action option 	USE FOR COMPARATIVE PURPOSES AND NEPA COMPLIANCE
<ul style="list-style-type: none"> • Add auxiliary lanes 	<ul style="list-style-type: none"> • Potential increase in safety and reliability • Would not accommodate future traffic demands unless combined with other improvement concepts 	<ul style="list-style-type: none"> • Lesser degree of impacts than other options with greater ROW requirements 	<ul style="list-style-type: none"> • \$7-10 M, not including ROW • Least cost for substantial safety improvement 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Add break-down area/shoulders 	<ul style="list-style-type: none"> • Potential increase in safety and reliability • Would not accommodate future traffic demands unless combined with other improvement concepts 	<ul style="list-style-type: none"> • Lesser degree of impacts than other options with greater ROW requirements 	<ul style="list-style-type: none"> • \$15-37 M, not including ROW • High cost for minor safety/capacity improvement 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Widen Arapahoe Road from 6 to 8 lanes 	<ul style="list-style-type: none"> • Potential increase in reliability • Reduced congestion may be offset by traffic operations and safety impacts of increased lane changing 	<ul style="list-style-type: none"> • Higher degree of impacts due to greater ROW requirements along entire corridor 	<ul style="list-style-type: none"> • \$23-39 M, not including ROW • Could be phased by segment 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Bus/HOV lanes 	<ul style="list-style-type: none"> • Reliability for transit vehicles improved • Option for HOV provided, but unlikely to result in substantial new car or van pools 	<ul style="list-style-type: none"> • Higher degree of impacts due to greater ROW requirements along entire corridor 	<ul style="list-style-type: none"> • \$23-39 M, not including ROW • Minimal benefit if not constructed in one package 	NOT INITIALLY, BUT FEASIBLE WITH BRT
<ul style="list-style-type: none"> • Construct separated through lanes/Boulevard 	<ul style="list-style-type: none"> • Provides balance of separated facilities for regional versus local traffic • Not applicable for much of the adjacent corridor development 	<ul style="list-style-type: none"> • Greatest amount of ROW required of any road option; resulting in higher degree of impacts 	<ul style="list-style-type: none"> • \$52-63 M, not including ROW • High cost and not effective if constructed in phases 	ELIMINATE
<ul style="list-style-type: none"> • Construct frontage roads 	<ul style="list-style-type: none"> • Provides alternative route to enhance local travel without impacting regional through traffic • Applicable in conjunction with potential future redevelopment of adjacent properties only between I-25 and Havana Street • Does not provide capacity for growth in regional travel along corridor 	<ul style="list-style-type: none"> • Lesser degree of impacts than options with greater ROW requirements 	<ul style="list-style-type: none"> • \$20-29 M, not including ROW, but cost could be borne by developers 	IN CONJUNCTION WITH FUTURE REDEVELOPMENT
I-25 Interchange Options				
<ul style="list-style-type: none"> • Partial cloverleaf 	<ul style="list-style-type: none"> • Driver expectancy similar to existing interchange • Provides capacity and storage to increase safety and reliability 	<ul style="list-style-type: none"> • One business relocation required • Existing haz mat sites may require remediation 	<ul style="list-style-type: none"> • \$45-55 M, including ROW • Could be built in phases 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Single point urban with Yosemite/ Costilla connection 	<ul style="list-style-type: none"> • Provides capacity and storage to increase safety and reliability • Eliminates traffic signal on Arapahoe 	<ul style="list-style-type: none"> • Up to two business relocations required • Existing haz mat sites may require remediation • Removal of ramps would open areas for future development 	<ul style="list-style-type: none"> • \$70-80 M (\$100-115 M including Yosemite/Costilla connection and ROW) • Difficult to build interchange in phases, but could phase Yosemite/Costilla connection first 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Tight urban diamond 	<ul style="list-style-type: none"> • Adds left turn movements at two ramp intersections and results in potential left turn queue impacts 	<ul style="list-style-type: none"> • Existing haz mat sites may require remediation • Removal of ramps would open areas for future development 	<ul style="list-style-type: none"> • \$50-60 M, including ROW • Difficult to build in phases 	ELIMINATE
<ul style="list-style-type: none"> • Diverging diamond 	<ul style="list-style-type: none"> • The 25 MPH design speed is not appropriate for high volumes and speed on Arapahoe Road • Driver expectancy and off-peak safety are critical concerns • I-25 bridge reconstruction required regardless of this retrofit design's reduced cross-section 	<ul style="list-style-type: none"> • No relocations required • Existing haz mat sites may require remediation • Removal of ramps would open areas for future development 	<ul style="list-style-type: none"> • \$40-50 M, including ROW • Very difficult to build in phases 	ELIMINATE
<ul style="list-style-type: none"> • Three level diamond 	<ul style="list-style-type: none"> • Driver expectancy for all movements is critical safety concern • Provides separation of traffic traveling through interchange 	<ul style="list-style-type: none"> • Greatest degree of visual impacts due to high profile • Three business relocations required • Existing haz mat sites may require remediation • Removal of ramps would open areas for future development 	<ul style="list-style-type: none"> • \$100-140 M, including ROW • Difficult to build diverges on Arapahoe Road in phases 	ELIMINATE
Parallel/Intersecting Roads				
<ul style="list-style-type: none"> • Widen Broncos Parkway/Easter Avenue/Havana/Dry Creek from 4 to 6 lanes 	<ul style="list-style-type: none"> • Not expected to divert substantial traffic from Arapahoe Road 	<ul style="list-style-type: none"> • Potential noise impacts to sensitive areas east of Potomac Street and east of Jordan Road 	<ul style="list-style-type: none"> • \$14-19 M, not including ROW • Could be built in phases 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Enhance Peakview/Caley and Briarwood as parallel routes 	<ul style="list-style-type: none"> • Although not expected to divert substantial traffic from Arapahoe Road, improves local traffic access and separates from regional traffic 	<ul style="list-style-type: none"> • Impacts to potential Section 4(f) property (Family Sports Golf Course) • Some degree of impacts to other resources due to ROW requirements 	<ul style="list-style-type: none"> • \$11-18 M, not including ROW • Could be built in phases 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • County Line/Cottonwood/Peoria to Jordan Road 	<ul style="list-style-type: none"> • Does little to effect Arapahoe Road traffic volume due to distance from the corridor 	<ul style="list-style-type: none"> • Potential impact to noise sensitive areas east of Potomac Street 	<ul style="list-style-type: none"> • \$28-36 M, not including ROW • Could be built in phases 	ELIMINATE

Red = negative result/impact or with potential for reduced effectiveness
Yellow = neutral result/minimal impact or change in measure of effectiveness
Green = positive result/benefit and potential for improved effectiveness

	Operations & Safety	Community, Business & Environment	Feasibility & Cost	Recommendation
	<ul style="list-style-type: none"> • Balance of Regional Travel /Local Access • Travel Reliability and Safety • Capacity for Growth 	<ul style="list-style-type: none"> • Environmental Impacts • ROW and Acquisitions 	<ul style="list-style-type: none"> • Magnitude of Cost • Constructability and Phasing 	
Transit/Alternative Mode/Other Options				
<ul style="list-style-type: none"> • Improve existing transit stop facilities and amenities 	<ul style="list-style-type: none"> • Matches different levels of passenger demand to transit stop function and amenities • Improved safety and amenities may encourage increased ridership 	<ul style="list-style-type: none"> • Few impacts due to small areas of potential disturbance 	<ul style="list-style-type: none"> • Standard Transit Stop - \$2-5 K/stop • Upgraded Stop - \$5-12K/stop • Major Transit Connection Stop - \$7-12 K/stop • Can be applied to any alternative and added in phases 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Additional Limited stop route overlay with existing Local Route 66 transit service 	<ul style="list-style-type: none"> • Complements local service and improves travel time for longer trips • Provides flexibility in serving different stops during different periods of day 	<ul style="list-style-type: none"> • No ROW impacts • Could attract more pedestrian activity and result in beneficial business impacts 	<ul style="list-style-type: none"> • Peak vehicles - \$2.2 M • Annual operating cost (weekdays) - \$750-800 K • No new infrastructure required. • Hours of operation could be phased 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Frequent fixed route shuttle 	<ul style="list-style-type: none"> • Provides more comprehensive transit access than local service on Arapahoe Road for residents and employees; connects to Arapahoe and Dry Creek LRT stations • Allows for transit access on lower volume roadways 	<ul style="list-style-type: none"> • Potential new stop locations could result in impacts if in sensitive areas 	<ul style="list-style-type: none"> • Peak vehicles - \$3.1 M • Annual operating cost (weekdays) - \$1.4-1.5 M • Requires new system of transit stops for implementation 	RECOMMENDED FOR FURTHER ANALYSIS
<ul style="list-style-type: none"> • Bus Rapid Transit (BRT) 	<ul style="list-style-type: none"> • Dedicated lanes could maximize travel time improvements for transit • Could be integrated with local service to provide higher quality of service to/from high demand locations • Ridership not proven with current/planned service 	<ul style="list-style-type: none"> • ROW impacts same as "Widen Arapahoe Road from 6 to 8 Lanes" because new lanes would be added 	<ul style="list-style-type: none"> • Vehicles - (3 vehicles) \$2.3 M • Annual operating cost - \$400 K • Requires significant roadway improvements and infrastructure costs for transit stop enhancements 	NOT RECOMMENDED AS AN INITIAL PHASE
<ul style="list-style-type: none"> • Transit Priority Applications 	<ul style="list-style-type: none"> • Could provide more reliable access and reduce delay for buses in the immediate vicinity of Arapahoe LRT station • Could negatively impact general traffic signal time and reduce LOS for through traffic on Arapahoe Road. Basic applications such as turn lane exceptions for buses could minimize impacts 	<ul style="list-style-type: none"> • Could attract more transit ridership, pedestrian and bicyclist activity, resulting in air quality benefits and beneficial business impacts 	<ul style="list-style-type: none"> • Intersection turn lane improvements and traffic signal infrastructure - \$5 - 9 M • Traffic signal operations - \$120 - 480 K • Requires ongoing coordination with overall traffic management strategies • (Costs assume 12 intersections) 	CONSIDER ONLY IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Sidewalk improvements along Arapahoe Road 	<ul style="list-style-type: none"> • Provide for improved continuity of pedestrian facilities • Detached sidewalks provide safety buffer between pedestrians and roadway 	<ul style="list-style-type: none"> • Could attract more transit ridership, pedestrian and bicyclist activity, resulting in air quality benefits and beneficial business impacts 	<ul style="list-style-type: none"> • \$3 - 5 M, not including ROW • Likely constructed within easements, rather than ROW 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Improved crossings of Arapahoe Road for ped/bike 	<ul style="list-style-type: none"> • Enhanced pedestrian signals would provide safer crossings of Arapahoe Road and connecting roadways • Potential grade separating would eliminate select conflicts between ped/bikes and motorized vehicular traffic 	<ul style="list-style-type: none"> • Could attract more transit ridership, pedestrian and bicyclist activity, resulting in air quality benefits and beneficial business impacts 	<ul style="list-style-type: none"> • At-grade signal and intersection improvements \$75 - 300 K per location • Grade separated crossing - \$1.5 - 2.5 M per location 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Bike route signing/stripping on parallel and intersecting streets 	<ul style="list-style-type: none"> • Enhanced signage/stripping would greatly improve ability to utilize safest, designated routes in study area and facilitate connection to regional system 	<ul style="list-style-type: none"> • Could attract more bicycle commuter traffic, resulting in air quality benefits 	<ul style="list-style-type: none"> • \$0.75 - 1.0 M (signs and striping only) • (Costs assume 15 miles of bike routes in study area) 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Rebuild/raise Arapahoe Road bridge over Cherry Creek 	<ul style="list-style-type: none"> • Facilitates pedestrian/bicycle path grade separation for extended Cherry Creek Trail, reducing conflicts with motorized vehicular traffic • Provides opportunity for improved ped/bike facilities on new bridge 	<ul style="list-style-type: none"> • Would require mitigation of construction impacts on natural stream environment 	<ul style="list-style-type: none"> • \$5 - 10 M - High cost for pedestrian crossing improvement unless constructed in conjunction with other roadway improvement needs 	IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • ITS Strategies 	<ul style="list-style-type: none"> • Traffic monitoring technologies support real-time traffic management needs • Effective traveler information systems can inform drivers of congestion, incidents and alternate routes • NextBus technology at transit stops can provide real-time information bus arrivals. Could help encourage increased ridership. 	<ul style="list-style-type: none"> • Could attract more transit ridership, pedestrian and bicyclist activity, resulting in air quality benefits and beneficial business impacts 	<ul style="list-style-type: none"> • Reasonable costs per installation location - costs continue to decrease as technology becomes more common • Improvement elements can easily be phased for implementation 	CONSIDER IN CONJUNCTION WITH OTHER IMPROVEMENTS
<ul style="list-style-type: none"> • Travel Demand Management Strategies 	<ul style="list-style-type: none"> • Makes the most efficient use of existing facilities by "managing actual demand". Well-conceived programs promote demand reduction through education, marketing, incentives for use of alternative modes, disincentives to drive/park and guidelines for new developments. 	<ul style="list-style-type: none"> • Could improve traffic operations, resulting in air quality and noise benefits. 	<ul style="list-style-type: none"> • Wide range of costs depending on which elements of the program are supported by local jurisdictions 	IN CONJUNCTION WITH OTHER IMPROVEMENTS

Red = negative result/impact or with potential for reduced effectiveness

Yellow = neutral result/minimal impact or change in measure of effectiveness

Green = positive result/benefit and potential for improved effectiveness
